If you have an engine that produces smoke and will fail its MOT because of high emissions then this is the oil to use. NoSmokeOil is the only solution available for Petrol and Diesel engines.

NoSmokeOil is not an Additive but a permanent solution. The Oil comes in three weights 5W 30, 10W 40 and 20W 50 which is the most common weight used in Classic Cars. The Oil will keep the engine components clean and deposit free, as well as protecting against wear, and corrosion. The 20/50 is ideal for older engines that suffer from high oil consumption and high emissions. It is also not subject to the same degree

of thinning at high temperatures as with conventional engine oils which makes it ideal for worn engines that have reduced oil pressure. The advanced ACEWERX unique formula also protects against and ensures that no gums, lacquers or carbon deposits build up inside the engine. To get the best results you will need to follow instructions very carefully and in addition to NoSmokeOil you will need a Flush Oil and two Oil Filters.
